

CHAPTER04 流入流程控制

▶ 函数参数关键词调用(参数个数不定)

```
def myfunc(title, *name):  
    '''参数个数不定.'''  
    print('Hello, ', title, end=' ' )  
    for n in name:  
        print(n, end=' ' )  
    print('!')
```

```
myfunc('Mr', 'Xue')  
myfunc('Dr', 'Lee', 'Feifei')
```

CHAPTER04 流入流程控制

► 函数参数关键词调用(关键词实现不确定)

```
def myfunc(title, **name):  
    print('Hello, ', title, end=' ')  
    firstname = ''  
    fullname = ''  
    lastname = ''  
    for each in name.keys():  
        if each == 'fullname':  
            print(name[each], '!')  
            break  
        elif each == 'firstname':  
            firstname = name[each]  
        elif each == 'lastname':  
            lastname = name[each]  
    else:  
        print(firstname, lastname, '!')  
myfunc('Dr', firstname='Lee', lastname='Feifei')  
myfunc('Dr', fullname='Lee Feifei')
```
