CHAPTER05 数据结构

CHAPTER05 类P88

类class

```
class Person:
  '''我的第一个类。''''
 title = 'Mr'
 _age = 20
                                              # 保护成员(继承, import时无)
 __gender = 'female'
                                              # 私有成员(不继承)
                                              # 构造函数
 def ___init___(self, fullname):
   self.fullname = fullname
 def sayHello(self):
                                              # 方法
   print('Hello', self.title, self.fullname)
 def __del__(self):
                                              # 析构函数
   print('u destroy me')
class Young(Person):
 title = 'Boy'
 def showGender(self):
                                              #报错: __gender为父类私有
   print(self.__gender)
```
